## PROFESSIONAL SUMMARY

Front-End Developer and Computer Science student with 6+ personal projects built using HTML5, CSS3, JavaScript (ES6+), and React.js. All projects are fully responsive, cross-browser compatible, and deployed to production. Currently learning Node.js, Express.js, MySQL, and MongoDB to grow into a Full-Stack Developer. Looking for a Front-End Developer Internship where I can contribute real skills, learn from experienced engineers, and help build great web products.

## SKILLS SUMMARY

|                       |                                                                     |
|-----------------------|---------------------------------------------------------------------|
| Front-End Development | HTML5, CSS3, JavaScript (ES6+), React.js, Bootstrap 5               |
| Responsive Web Design | Mobile-First Design, Flexbox, CSS Grid, Cross-Browser Compatibility |
| Back-End Basics       | Node.js, Express.js, REST API Integration, JSON                     |
| Databases             | MySQL, MongoDB                                                      |
| CMS & Platforms       | WordPress, Elementor, Vercel, Netlify                               |
| Developer Tools       | Git, GitHub, VS Code, Chrome DevTools, Postman                      |
| Core Skills           | UI/UX Design, DOM Manipulation, Debugging, Version Control, Agile   |
| Currently Learning    | React Hooks, Context API, Node.js REST APIs, MongoDB CRUD           |

## PROJECTS | FRONT-END DEVELOPMENT

### [Personal Portfolio Website](#) — HTML5 | CSS3 | JavaScript | Vercel

- Built a 5-section responsive portfolio website from scratch using HTML5, CSS3, and JavaScript — works on all screen sizes and loads in under 2 seconds.
- Used CSS animations and smooth scroll to improve the look and feel, making it easy for visitors to find information quickly.
- Deployed on Vercel with automatic updates — every time I push new code, the live site updates within 30 seconds.

### [Real-Time Weather App](#) — HTML5 | CSS3 | JavaScript (ES6+) | REST API

- Connected to the OpenWeatherMap REST API to show live weather data — temperature, humidity, wind speed, and a 5-day forecast — for any city in the world.
- Added clear error messages when users type a wrong city name or lose internet, so the app never crashes or shows a blank screen.
- Used CSS Grid and Flexbox so the layout looks clean and organized on phones, tablets, and desktops — tested on 3+ screen sizes.

### [QR Code & Barcode Generator](#) — HTML5 | CSS3 | JavaScript | QR Library

- Built a tool that turns any text, link, or contact info into a downloadable QR code or barcode instantly — no page reload needed.
- Added live input validation that checks the user's text as they type, reducing wrong inputs by catching errors before the user clicks generate.
- Kept the page smooth and fast even when the user types very quickly — no lag, no flickering, no delay.

### [Xavier Blog Platform](#) — WordPress | Elementor | HTML5 | CSS3 | JavaScript

- Built a full blog website on WordPress with 3 user roles (admin, editor, reader), custom post types, and a clean, organized layout.

- Edited the WordPress theme code directly with custom HTML, CSS, and JavaScript to match the site's design — improved page load speed by removing unused styles.
- Added SEO settings (meta titles, descriptions, sitemap) to help the blog rank better on Google search results.

### Classroom Finder & Scheduling System — HTML5 | CSS3 | JavaScript

- Created a search tool where students can find a free classroom by building, time slot, or room size — results update instantly without refreshing the page.
- Built the entire search and filter system using only plain JavaScript — no extra libraries, keeping the file size small and the load time fast.
- Organized the code into separate modules (search, filter, display) so it is easy to update or add new features without breaking anything.

### Scholarship Finder Platform — HTML5 | CSS3 | JavaScript

- Built a website where students can browse and filter 50+ scholarship listings by education level, country, and deadline — all in one place.
- Made the filters work instantly as the user selects options — no waiting, no page reload, results appear in under 1 second.
- Designed the site mobile-first so it is easy to use on any phone or low-speed internet connection, reaching more students.

## EDUCATION

---

**Bachelor of Science in Computer Science (BSCS)** | University of Lakki Marwat | Expected: 2028 *(Currently in 4th Semester — GPA on track)*

## CERTIFICATIONS

---

- WordPress Development Certification — covers building and customizing websites, managing plugins, editing themes, and connecting front-end code to CMS content.

## CORE COMPETENCIES

---

Front-End Development • Responsive Web Design • REST API Integration • Problem Solving • Team Work • Fast Learner • Clear Communication • Attention to Detail • Version Control (Git)
